To Whom It May Concern:

In March of 2019 Benford installed a UV curing system on our Komori LS840P 40-inch perfecting press. The system installation was coordinated to immediately follow the installation of the press. The installation and training were fast and easy and the Benford system is very user friendly.

After running the system for 3 months and being impressed with the results, we asked Benford to retrofit our Komori LS40 6-color with the same system. We configured the system with 4 light cassettes and several positions where we could place them in the press to match the requirements of the job.

We have been pleased with the results from these systems, the operating cost, and the excellent support from the staff at Benford.

I would highly recommend the Benford UV system as an addition or replacement when UV curing is your goal.

Sincerely,
